

HQS2 Series

OPERATES AT 16MPa

BY SELECTING OPERATING PRESSURE AND USE FREQUENCY

★ COMPACT DESIGN HYDRAULIC CYLINDER
IN INFINITE PURSUIT OF
COST PERFORMANCE

WE PRESENT
"RELIABILITY"

● ALUMINUM BODY, COMPACT DESIGN
HYDRAULIC CYLINDER

Conforms to JIS B8367-6. Fatigue test classification A1

● 8 TYPES OF BORE SIZE, 20mm, 25mm,
32mm, 40mm, 50mm, 63mm, 80mm and
100mm

$\phi 20, \phi 25, \phi 32, \phi 40, \phi 50, \phi 63, \phi 80$, and $\phi 100$

● ROD GLAND CONSTRUCTED OF
SPECIAL COPPER ALLOY

Improves wear resistance.

● NEW DESIGN SWITCH BRINGS
MAINTAINABILITY

COMMON TO AND USABLE FOR ALL TIE ROD
END TYPE SWITCH SET CYLINDERS

- Switch can be installed either on the right or left.
- Switch slides freely.
- Cord can be extended to the rear or to the top.
- Switch conforming to CE mark is available.

● Compatible with single rod type and double rod type

Double acting single rod

HQS2 · HQSW2

HQS2R · HQSW2R

Double acting double rod

HQS2D · HQSW2D

HQS2RD · HQSW2RD

- Universal type and cutting oil resistant specifications have the same dimension.
- Installation dimensions are the same for both standard type and switch set type.

● For rod end specifications, male and female thread types are available as well as various special end types.

Female type

Male type

Special and type

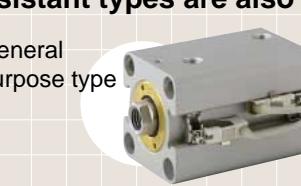

SD type

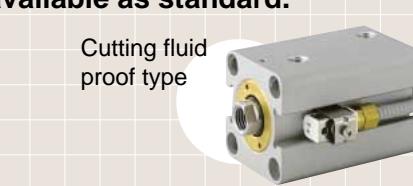

FA type

● Wide selection of support hardware SD, FA, FB, and LD type

General purpose type

Cutting fluid proof type

HQS2R · HQS2RD

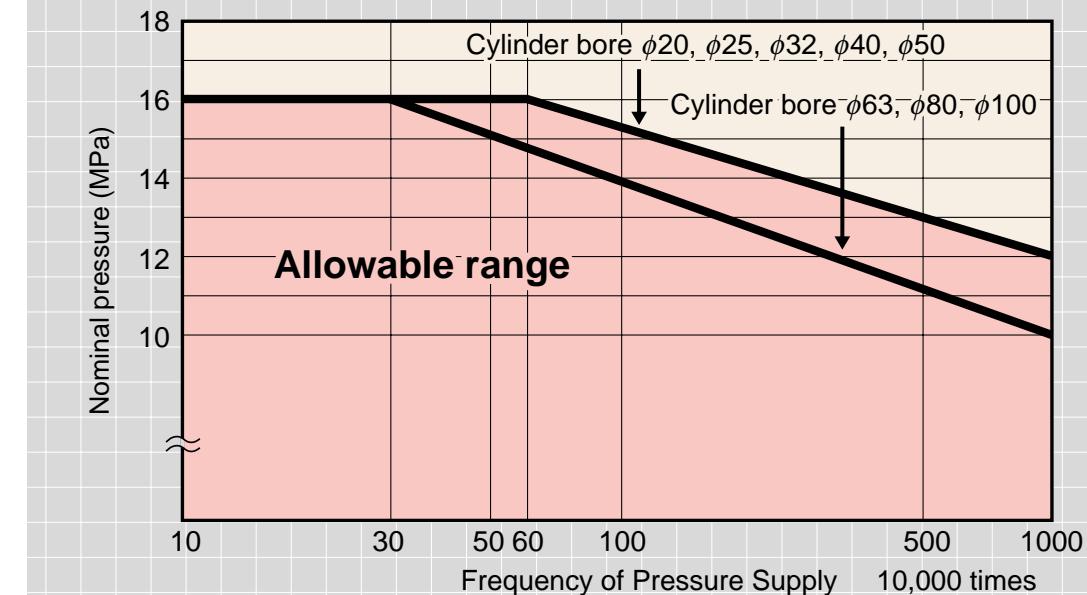

HQS2W2R · HQSW2RD

- Cutting fluid proof type
Packing of dust wiper dedicated to cutting oil resistant type is available for cutting oil resistant type.

● Stroke

5 to 100 mm (depends on bore)

■ NOMINAL PRESSURE DIAGRAM OF HQS2

■ How to view the diagram

- Frequency of pressure supplied to the cylinder is taken along X-axis. (Horizontal)
- Move up vertically from the frequency, and the pressure where the line crosses the limit line of each bore size indicates the pressure (nominal pressure) at which the cylinder can be used up to the corresponding frequency of pressure supply. (Rupture probability 1%)

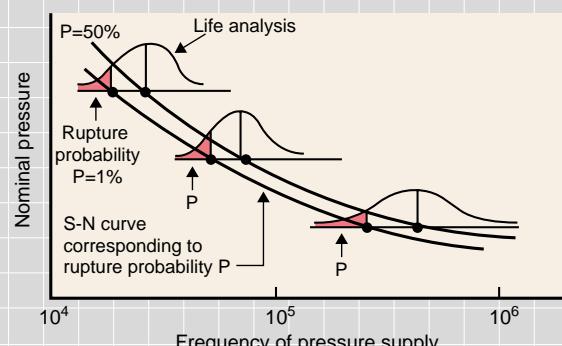

■ Testing procedure

In calculating the nominal pressure, fatigue test is carried out with reference to "Guideline for selecting and using hydraulic cylinder, Annex 2 Strength testing procedure of hydraulic cylinder" of JFPS1014: 2002 (Japan Fluid Power Industrial Association Standard).

In concrete, pressure is applied to several tens of supply cylinders repeatedly, the frequency of rupture is measured and processed statistically to obtain the nominal pressure.

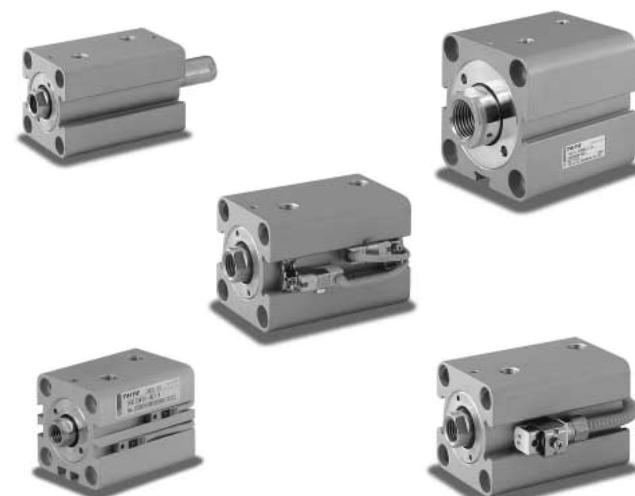

■ How to determine the nominal pressure

- Fatigue life is determined by material fatigue test described in testing procedure, and the value obtained by processing such data statistically.
- Life distribution is obtained from material fatigue test data, of which the value of rupture probability 1% is used for base of nominal pressure diagram.
[Note] No point of 0% exists in terms of statistical method.

OPERATES AT UP TO 16MPa, DEPENDING ON FREQUENCY OF PRESSURE SUPPLY

- Wide selection of models are available of cylinder bore $\phi 20$ to $\phi 100$.
- Light-weight, compact design hydraulic cylinder with bodies constructed of special aluminum alloy.
- Cost-effective selection is available based on frequency of operation and operating pressure.
- Aluminum body, compact design hydraulic cylinder in pursuit of cost performance.
- Rod gland constructed of special copper alloy for improved wear resistance.

Standard Specifications

Types	Specifications of General Purpose	Cutting Fluid Proof Types
Nominal pressure (According to nominal pressure diagram)	$\phi 20, \phi 25, \phi 32, \phi 40, \phi 50$ 16MPa (Fatigue endurance frequency 6×10^5) 12MPa (Fatigue endurance frequency 1×10^7)	
	$\phi 63, \phi 80, \phi 100$ 16MPa (Fatigue endurance frequency 3×10^5) 10MPa (Fatigue endurance frequency 1×10^7)	
Proof test pressure	20MPa	
Minimum working pressure	0.3MPa	
Operating speed range	8 - 100mm/s	
Temperature range (Ambient temperature and oil temperature)	Standard type -10 - +70°C Switch set AX · AZ types · T type -10 - +70°C WR · WS types -10 - +60°C (at non-freezing condition)	
Structure of cushioning	None	
Adaptable working oil	Petroleum-based fluid (For other working oil, refer to the table of working oil adaptability)	
Tolerance of thread	JIS 6H/6g	
Tolerance of stroke	0 - 0.8mm	
Mounting type	SD, LD, FA, FB	
Rod end thread	Female and male thread	
Suitable switch for switch set	$(\phi 20, \phi 25)$ T type HQS2R: ($\phi 32 - \phi 100$) AX · AZ type WR · WS type	HQSW2R: WR · WS type

Terminologies

Nominal pressure

Operating pressure which guarantees performance under specified condition.

Specified condition means our fatigue test with reference to "Guideline for selecting and using hydraulic cylinder, Annex 2 Strength testing procedure of hydraulic cylinder", JFPS 1014:2002 (Japan Fluid Power Industrial Association Standard)

Proof test pressure

Static pressure used for inspection which does not cause abnormality when held for specified time, and does not deteriorate cylinder performance when returned to the atmospheric pressure.

Minimum working pressure

The minimum pressure that the cylinder placed horizontally without a load can work.

Notes) • This cylinder is not equipped with an air bleeder.

- Since lateral load (eccentric load) cannot be applied to the piston rod, carefully adjust it after rod end attachment.

Double acting single-rod

Standard type
(HQS2 · HQSW2)

Switch set
(HQS2R · HQSW2R)

- Cylinder dimensions are all the same for both general purpose type and cutting fluid proof type.

Double acting double-rod

Standard type
(HQS2D · HQSW2D)

Switch set
(HQS2RD · HQSW2RD)

Compact Design Hydraulic Cylinder

Notes) • Specify switch set type as above when use switch on cylinder.
Switch can not use on Standard type.

Nominal pressure diagram

How to read the diagram

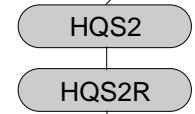

- Frequency of pressure supplied to the cylinder is taken along X-axis.
- Move up vertically from the frequency, and the pressure where the line crosses the limit line of each bore indicates the pressure (nominal pressure) at which the cylinder can be used up to the corresponding frequency of pressure supply. (Rupture probability 1%)

General purpose type (Bore $\phi 20$ - $\phi 100$)

Dotted lines for types and symbols are not written when unnecessary.

HQS2RD : Switch set

[3] Fluoric rubber

[6] Hydrogenated nitrile rubber

Note) The seal of bore size 20mm & 25mm is only Nitrile rubber for high temperature.

SD SD type, basic type

LD Foot type

FA Head flange mounting

FB End cap flange mounting

 $\phi 20 \cdot \phi 25 \cdot \phi 32 \cdot \phi 40 \cdot \phi 50 \cdot \phi 63 \cdot \phi 80 \cdot \phi 100$

Without cushion

Cylinder bore (mm)

Cylinder stroke (mm)

Note) When the switch is retrofitted to the standard type, the switch does not work.

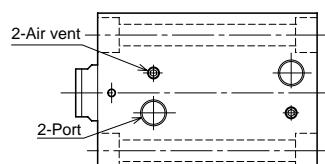

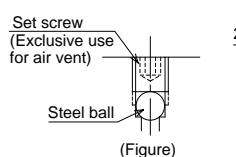

Adaptability of Working Oil to Packing Material

Packing Material	Adaptable Working Oil				
	Petroleum-based fluid	Water-glycol fluid	Phosphoric ester fluid	W/O Water in oil fluid	O/W Oil in water fluid
[3] Fluoric rubber	○	✗	○	○	○
[6] Hydrogenated nitrile rubber	○	○	✗	○	○

- Notes)
1. The ○ and ○ - marked items are applicable, while the ✗ - marked items are inapplicable.
 2. The ○ - marked items are the recommended packing materials in case of giving the first priority to abrasion resistance.

★ Specification of Air Vent (Option)

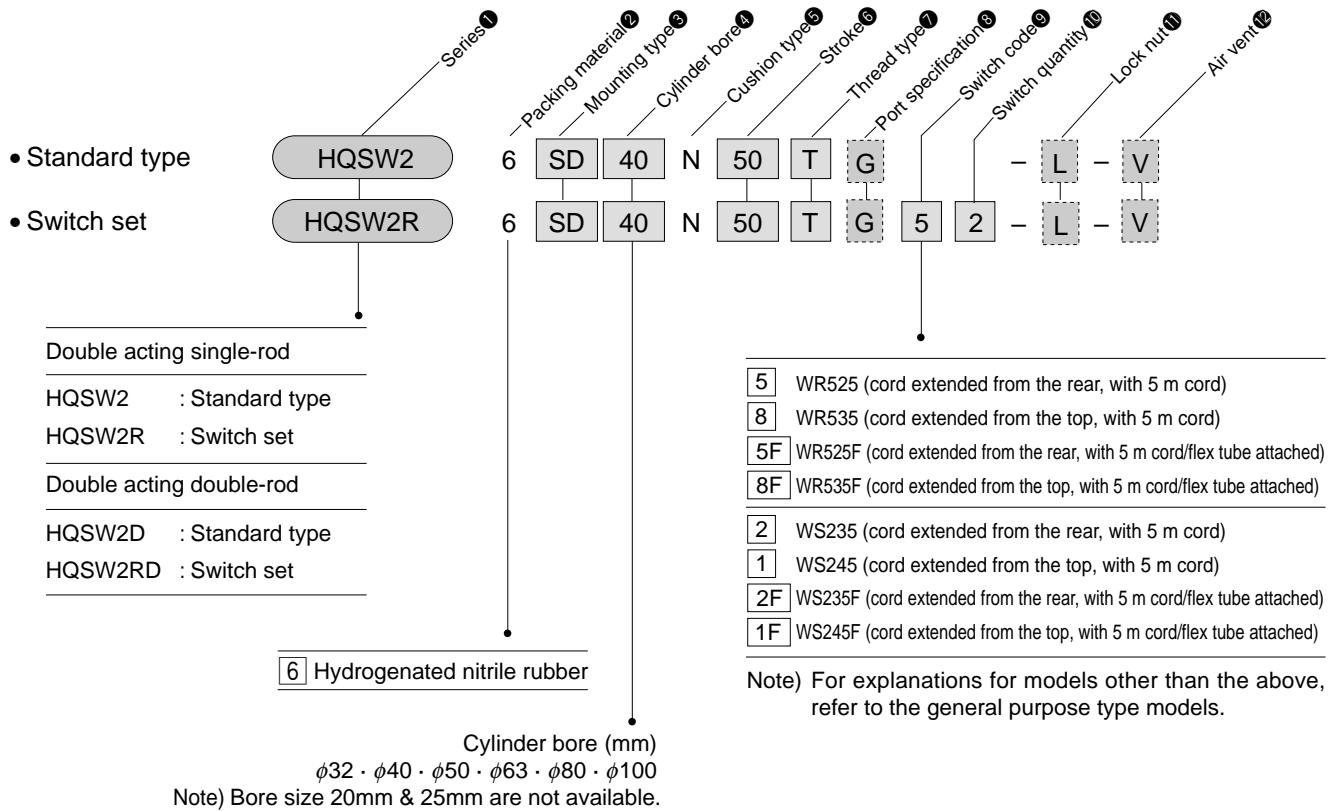

- The air vents are laid on the port surface and located symmetrical position to the port.

(Structure):

Single-rod, Double-rod
SD/LD/FA/FB type

Cutting fluid proof type (Bore $\phi 32 - \phi 100$) Dotted lines for types and symbols are not written when unnecessary.  Semi-standard components

Note) For explanations for models other than the above, refer to the general purpose type models.

Cutting Fluid Proof Type/Adaptability of Cutting Fluid to Packing Material

Packing Material	Non-water Soluble Cutting Oil		Water Soluble Cutting Oil
	Type 1	Type 2	
[6] Hydrogenated nitrile rubber	○	✗	○

○ : applicable ✗: inapplicable

★ How to order G screw piping port (only for SD type)

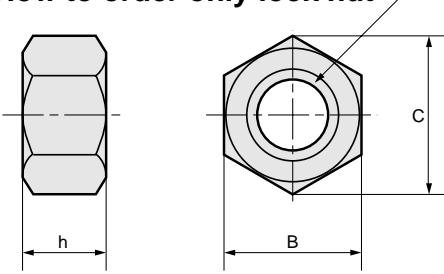

- Please specify the model as following.
ex. HQS2 6SD63N30 – G
G screw piping port

Note) In some bores, the apparent dimensions are changed from their standard when you specify G screw. Please refer to the detailed dimension table in following pages.

Dimension Table

Bore	Part Model	d	B	C	h
$\phi 20$	LNH-10F-H	M10×1.25	17	19.6	6
$\phi 25$	LNH-12F-H	M12×1.25	19	21.9	7
$\phi 32$	LNH-16F-H	M16×1.5	22	25.4	10
$\phi 40$	LNH-20F-H	M20×1.5	27	31.2	12
$\phi 50$	LNH-24F-H	M24×1.5	32	37.0	14
$\phi 63$	LNH-30F-H	M30×1.5	41	47.3	17
$\phi 80$	LNH-39F-H	M39×1.5	55	68.5	20
$\phi 100$	LNH-48F-H	M48×1.5	70	80.8	26

★ How to order only lock nut

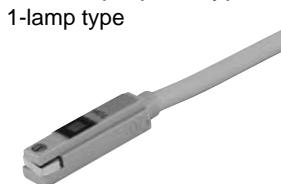

Switch List (Bore of $\phi 20$ - $\phi 25$)

Kind	Switch Symbol	Load Voltage Range	Load Current Range	Maximum Open/Close Capacity	Protective Circuit	Indicating Lamp	Wiring Method	Cord Length	Applicable Load Device

○ : Standard manufacturing range, □ : Range available for manufacturing for order (Delivery date depends on bore and stroke).

Contact us for detail.)

• For the minimum stroke of the switch set, refer to the Switch Mounting Minimum Possible Stroke table. (P.7)

Note 1) Size of 5mm stroke cylinder body of bore 20mm and 25mm is same dimension as body of 10mm stroke.

φ80	φ45	5027	3436		3436
φ100	φ56	7854	5391		5391

Formula F = A·P·β(N)

F: Cylinder force (N)

A: Piston pressurized area (mm²)

P: Applied pressure (MPa)

β: Load rate

Calculation example

Double acting single-rod, bore of φ40, applied pressure of 10 MPa, load rate of 0.8

Push side cylinder force (N)

= 1257 × 10 × 0.8 = 10056 (N)

Pull side cylinder force (N)

= 876 × 10 × 0.8 = 7008 (N)

Cutting fluid proof type

WR - WS type switch attachment dimensions

• Cord rear wiring

WR525 (contact)

WS235 (no contact)

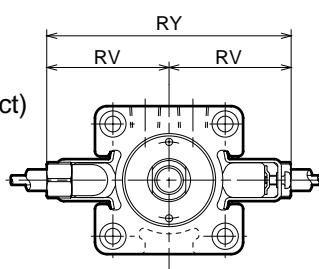

* Type of bore 100 mm has mounting groove on three sides.

• Cord upper wiring

WR535 (contact)

WS245 (no contact)

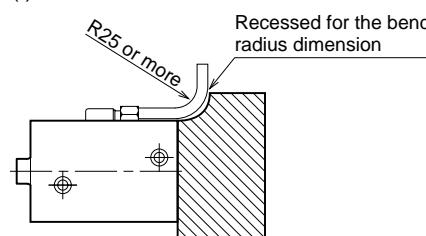

* Type of bore 100 mm has mounting groove on three sides.

Dimension Table

Bore	RV		RY		UX1		UX2	
	Cord rear wiring	Cord upper wiring	Cord rear wiring	Cord upper wiring	WR	WS	WR	WS
φ32	53	53	106	106	11(11)	15(15)	12(28)	16(32)
φ40	57	57	114	114	17(17)	20(20)	14(33)	16(36)
φ50	62	62	124	124	19(19)	21(21)	16(35)	20(37)
φ63	69	69	138	138	20(20)	24(24)	21(36)	23(40)
φ80	79	79	158	158	25(25)	29(29)	25(43)	29(47)
φ100	90	90	180	180	33(33)	35(35)	40(50)	41(52)

Note) • Set the flex tube so that its bend radius becomes R25 or more.
If the bend radius becomes smaller than this value, the cord may be disconnected

• Numeric within () indicates the dimension of double-rod type.

When the switch cannot be attached as shown above, use the other type (cord upper wiring).

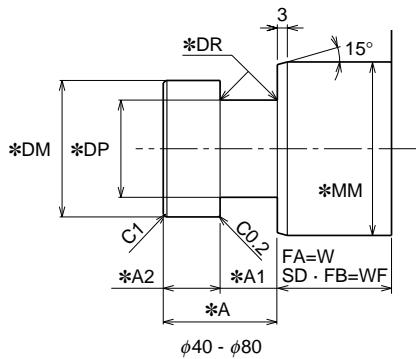

Special specification at the rod end

■ You can easily order following categorized items using the Semi-standard symbols and dimensional parameters.
(No need to specify dimensional parameters if you would apply the basic dimensions.)

How to order Series Model number - X Semi-standard symbols Dimensional parameters

Parameter KM and KP need to be specified as a pair.

ex. **A83**

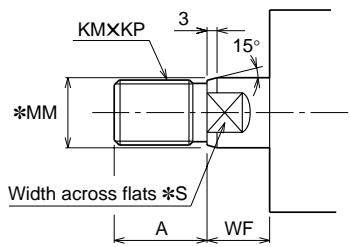

- A83, bore:40mm, WF:60mm
HQS2 6SD40N50T-X A83
WF-60

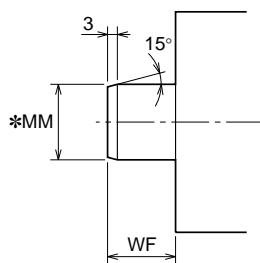

Note) Only WF dimension can be changed at A82 and A83 special rod end shape.
If you would like to change other.

$\phi 100$	RMH-56	$\phi 124$	60.5	3	$\phi 60$	$\phi 41$	$\phi 18$	$\phi 26$	22.5	40	20	17.5	$\phi 92$

Switch Detection Position Adjustment Method

T type switch ($\phi 20 \cdot \phi 25$)

1. Place the switch into the gutter as shown on the left.
2. Slide the switch to any desired position. Installing in the center of operating range provides the most stable detection.
3. If the cylinder stroke end is detected, install the switch at the dimension UX (optimum sensing position).
4. Slide the unit to the detection position and tighten the mounting screw.

TORQUE OF MOUNTING SCREW

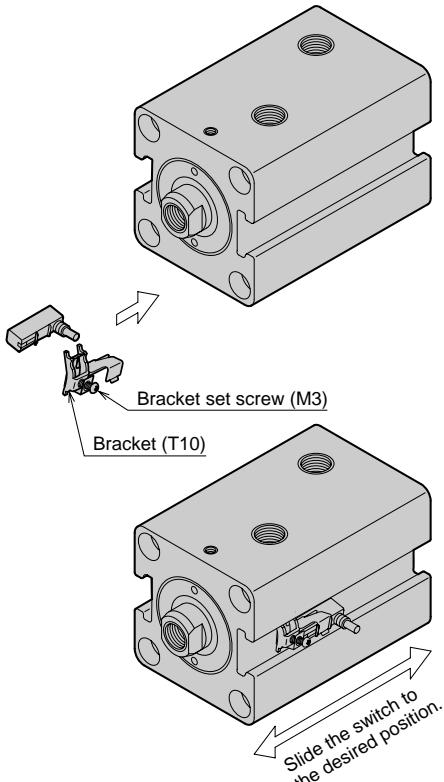

Switch type	T0 · T5 · T2 · T3	T2Y
Nominal diameter of mounting screw	M2.5	M3
Mounting screw tightening tool	Flat-blade precision screwdriver	Phillips type small screwdriver
Tightening torque	Approx 0.1 to 0.2 Nm	Approx 0.4 Nm

Note) If the tightening torque to tighten the bracket set screw is inappropriate, switch dislocation or damage to the switch body may be caused.

AX · AZ type switch ($\phi 32 \cdot \phi 100$)

AX · AZ type bracket set screw's tightening torque:

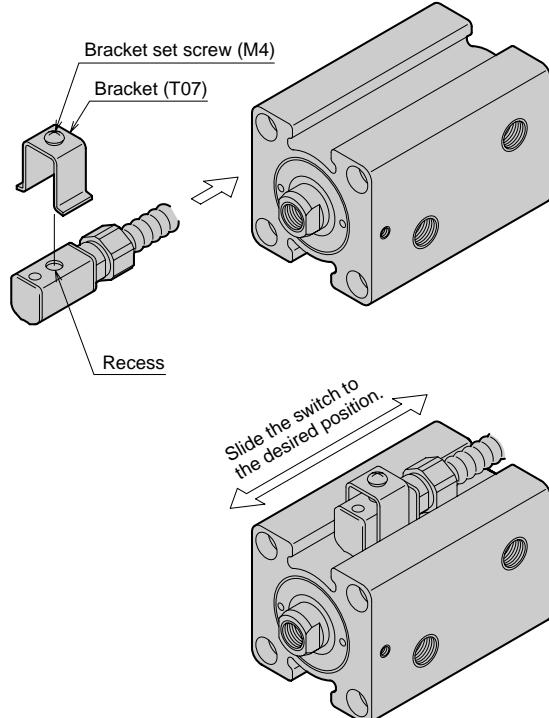

Approximately 0.4 N·m

WR · WS type switch ($\phi 32 \cdot \phi 100$)

WR · WS type bracket set screw's tightening torque:

Approximately 0.6 N·m

1. Loosen the bracket set screw and attach the bracket to the switch center part.
2. Attach the switch and bracket assembly to the cylinder body's switch attachment section.
3. Slide the switch to the desired position. When the switch is attached to the center of the operating range, switch detection is performed most stably.
4. To detect the cylinder stroke end, attach the switch to the UX dimension (optimal sensing position).
5. After sliding the switch to the detection position, tighten the bracket set screw.

Note) If the tightening torque to tighten the bracket set screw is inappropriate, switch dislocation or damage to the switch body may be caused.

Precautions for Use

- When using the cylinder with the rod push output, tighten the screw(s) to the rod end completely so that no load is applied to the piston rod screw section.
- Since lateral load (eccentric load) cannot be applied to the piston rod, carefully adjust it after rod end attachment.
- When tightening the double-acting double rod type's piston rod end thread(s), be sure to use the width across flats of the rod to be tightened. Since the double rod type's piston rod is tightened by screws, be careful not to apply rotational force to the piston rod's both ends.

Note) Since the HQS2 series is not equipped with the air bleeder, perform air-bleeding via the piping section.

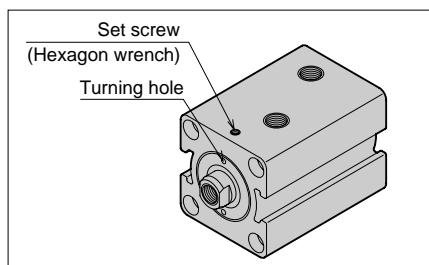

- Use four hexagon socket bolts (JIS B1176, strength classification of 10.9 or more) to install the cylinder.
- When using mounting bolts, screw the bolt's threads 80% or more into the installation members. The material for the installation members must have strength equal to SS400.
- When using nuts to tighten the mounting bolts, use steel nuts with a strength classification of 6 or more. (However, DO NOT use type 3 nuts.)
- When using the mounting bolts to secure the cylinder unit, be sure to use the following standard tightening torque.

Cylinder Mounting Bolt Tightening Torque

Cylinder Bore	Mounting Bolt	Tightening Torque N·m
φ20	M5 × 0.8	4.8
φ25	M5 × 0.8	4.8
φ32	M6 × 1	5.9
φ40	M8 × 1.25	14.0
φ50	M10 × 1.5	28.0
φ63	M12 × 1.75	49.0
φ80	M14 × 2	77.0
φ100	M16 × 2	120.0

- When installing the foot type, use the accompanying key. If this key cannot be used, attach a stopper in front and rear of the cylinder unit. Otherwise, the mounting bolts may be damaged.

Overhaul and Reassembly Requirements

- After removing the set screw, use the rod gland's turning hole to remove the rod gland from the cylinder

Note) The body contains a copper piece under the set screw.

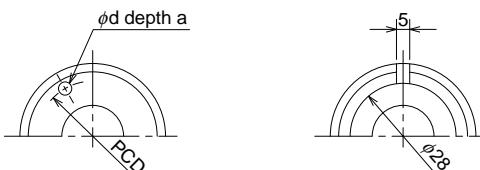

body. Since, when removing the rod end thread's jig, burrs may occur on the rod's width across flats, use a file or other appropriate tools to remove the burrs and then remove the rod gland.

- The piston rod and piston cannot be disassembled.
- When reassembling the cylinder, be careful that foreign matters such as dust, filings, and debris do not enter the inside of the cylinder.
- Under the set screw, a rod gland thread protective copper piece is equipped. First, remove this ball and then tighten the rod gland.
- After tightening the rod gland, return the seal set's copper piece in place and tighten the set screw.

Seal Replacement

- When overhauling the cylinder, replace all the sealing materials (seals and gaskets) with new ones.
 - General purpose type (HQS2, HQS2D, HQS2R, HQS2RD)'s piston seal, rod seal, dust wiper, and rod gland O-ring can be replaced.
 - Cutting fluid proof type (HQSW2, HQSW2D, HQSW2R, HQSW2RD)'s piston seal, rod seal, rod gland O-ring can be replaced.
- Wiper-seal of Cutting Fluid Proof Type is pressed into the rod grand, so rod grand including the Wiper-seal is available as a spare part. Please be careful for not being included wiper-seal in the seal kit.
- Since the piston and rod have been locked, the piston rod O-ring cannot be replaced.
