## **WARNING – USER RESPONSIBILITY**

**FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.**

This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalogue and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

## **Offer of Sale**

Please contact your Parker representation for a detailed "Offer of Sale".

PGP 500 pumps offer superior performance, high efficiency and low noise operation at high operating pressures. They are produced in four frame sizes (PGP 502, PGP 505, PGP 511, PGP 517) with displacements ranging from 0.8 to 70 cm<sup>3</sup>/rev. A wide variety of standard options is available to meet specific application requirements.

**Characteristics**

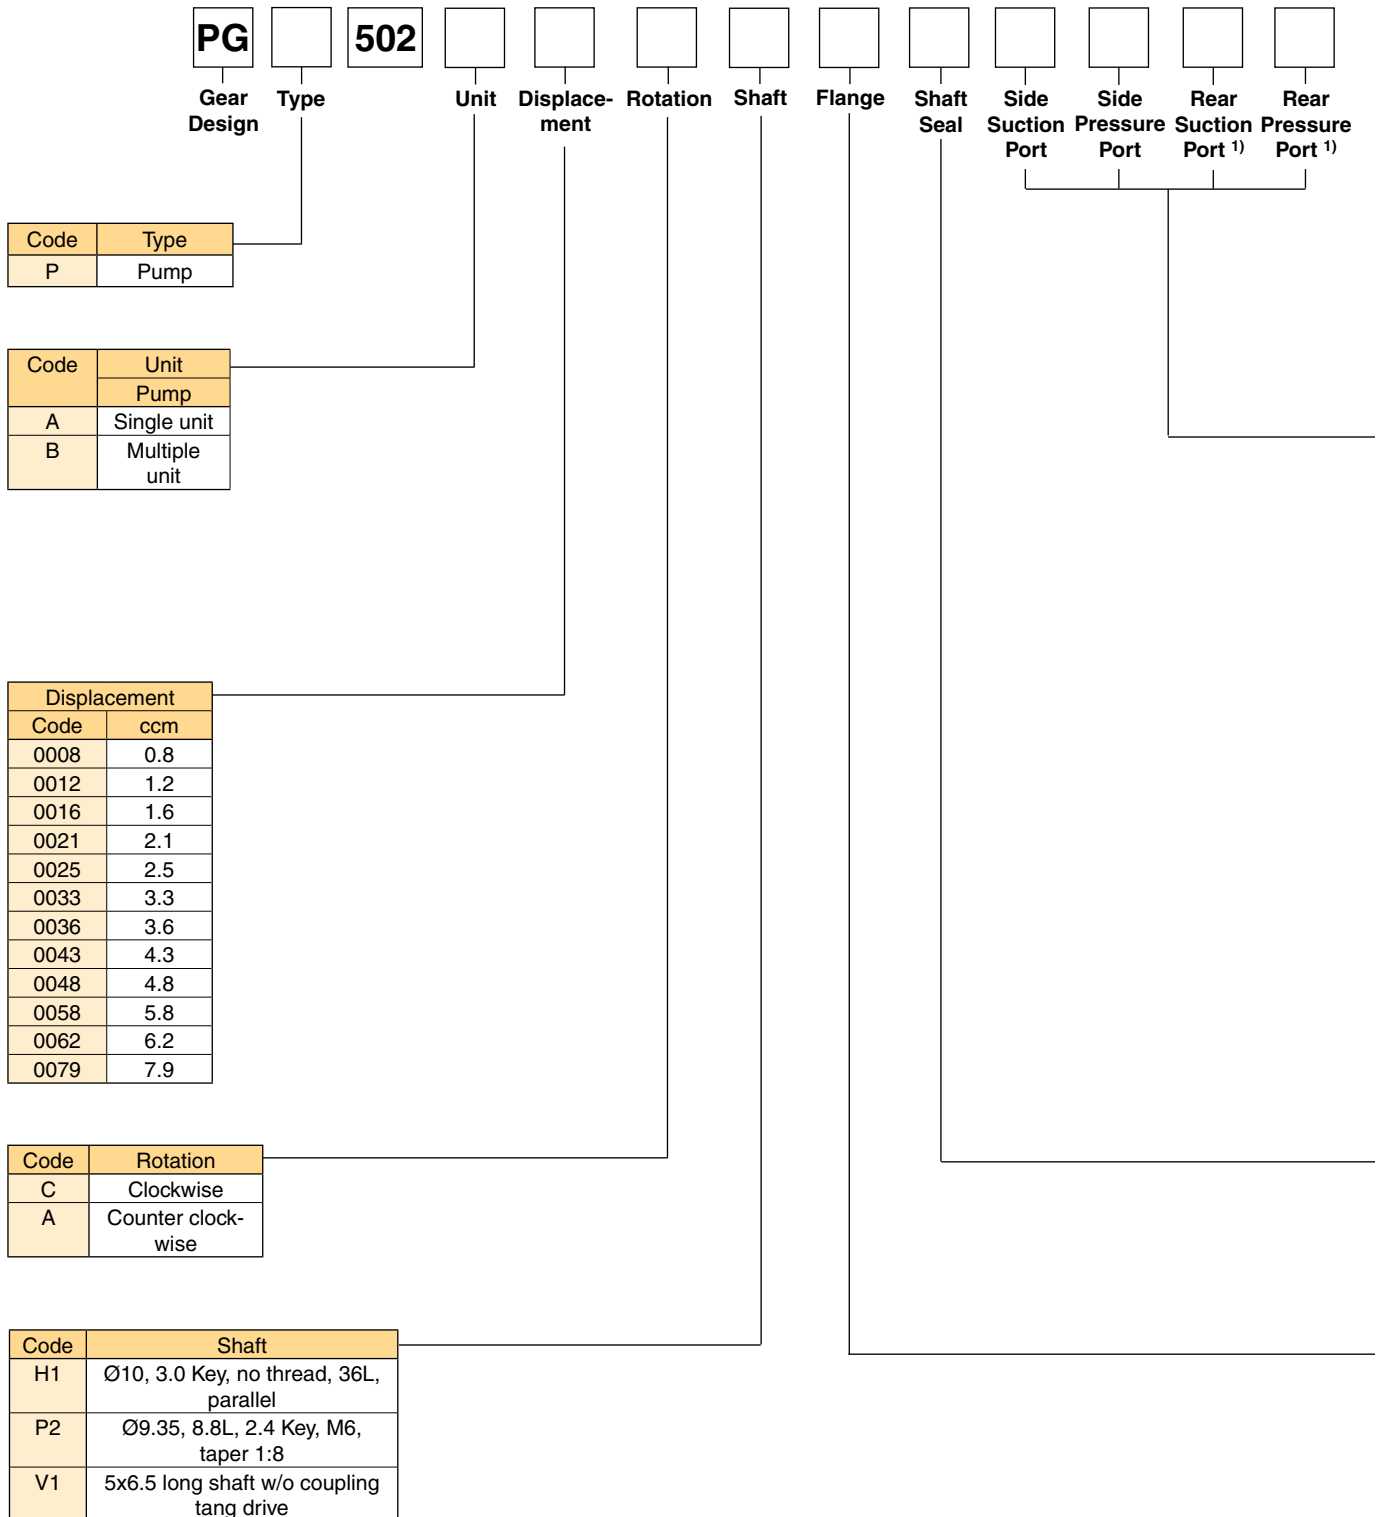

- **Up to 280 bar continuous operation**  
High strength materials and large journal diameters provide low bearing loads for high pressure operation.
- **Low noise**  
PGP 502 - 9 tooth gear profile, PGP 505 and 517 - 13 tooth gear profile, PGP 511 - 12 tooth gear profile and optimized flow metering provide reduced pressure pulsation and exceptionally quiet operation.

- **High efficiency**  
Pressure balanced bearing blocks assure maximum efficiency under all operating conditions.
- **Application flexibility**  
International mounts and connections, integrated valve capabilities and common inlet multiple pump configurations provide unmatched design and application versatility.
- **Large range of integrated valves**

**Characteristics**

Pump type	Heavy-duty, aluminium, external gear.
Mounting	SAE, rectangular, thru-bolt standard specials on request.
Ports	SAE and metric split flanges and others
Shaft style	SAE splined, keyed, tapered, cylindrical tang drive, specials on request
Speed	500 - 5000 rpm, see Technical Data
Theor. displacement	See Technical Data
Drive	Drive direct with flexible coupling is recommended.
Axial / Radial load	Units subject to axial or radial loads must be specified with an outboard bearing.
Inlet pressure	Operating range 0.8 to 2 bar abs. Min. inlet pressure 0.5 bar abs. Short time without load. Consultation is recommended.
Outlet pressure	See Technical Data
Pressure rising rate	Max. 3000 bar/s
Flow velocity	See Nomograph for Pipe Velocity
Hydraulic fluids	Hydraulic oil HLP, DIN 51524-2
Fluid temperature	Range of operating temperature -15 to +80 °C. Max. permissible operating pressure dependent on fluid temperature. Temperature for cold start -20 to -15 °C at speed ≤ 1500 rpm. Max. permissible operating pressure dependent on fluid temperature.

Fluid viscosity	Range of operating viscosity 8 to 1000 mm <sup>2</sup> /s (511 & 517) 20 to 1000 mm <sup>2</sup> /s (502 & 505) Max. permissible operating pressure dependent on viscosity. Viscosity range for cold start 1000 to 2000 mm <sup>2</sup> /s at operating pressure p ≤ 10 bar and speed n ≤ 1500 rpm.
Range of ambient temperature	-40 °C to +70 °C
Filtration	According to ISO 4406 Cl. 19/17/13
Direction of rotation (looking at the drive shaft)	Clockwise, counter-clockwise or double. Attention! Drive pump only in indicated direction of rotation.
Multiple pump assemblies	<ul style="list-style-type: none"> <li>• Available in two or three section the limitations shown in the shaft loading rating table in this catalogue.</li> <li>• Max. load is determined by adding the torque values for each pumping section that will be simultaneously loaded.</li> </ul>
Separate or common inlet capability	Separate inlet configuration: <ul style="list-style-type: none"> <li>• Each gear housing has individual inlet and outlet ports.</li> </ul> Common inlet configuration: <ul style="list-style-type: none"> <li>• Two gear sets share a common inlet.</li> </ul>

Not all variances of ordering codes can be offered. Please check available part numbers first. For not yet implemented part numbers or special requests please contact Parker Hannifin.

<sup>1)</sup> Only coded for the last section.

Bearing loads for code F4

Units subject to axial or radial loads, for instance drive with V-belts or gear wheels, must be specified with an outboard bearing.

The diagrams below show the maximum axial or radial loads that can be tolerated referred to a bearing life of  $L_H = 1000$  h.

$F_r$  is reduced by  $0,7 F_a$  when axial loading is applied.

Over many years Parker Hydraulics has supplied gear pumps and motors for mobile and industrial markets worldwide, especially for materials handling, commercial grass cutting and construction equipment applications. Many Parker pumps and motors have been developed and tested for the specific needs of these industries.

Parker's defined strategy to provide engineered solutions, coupled with an award winning flexible manufacturing system, has resulted in a wide range of SAE/DIN/European and other special options being available as standard.

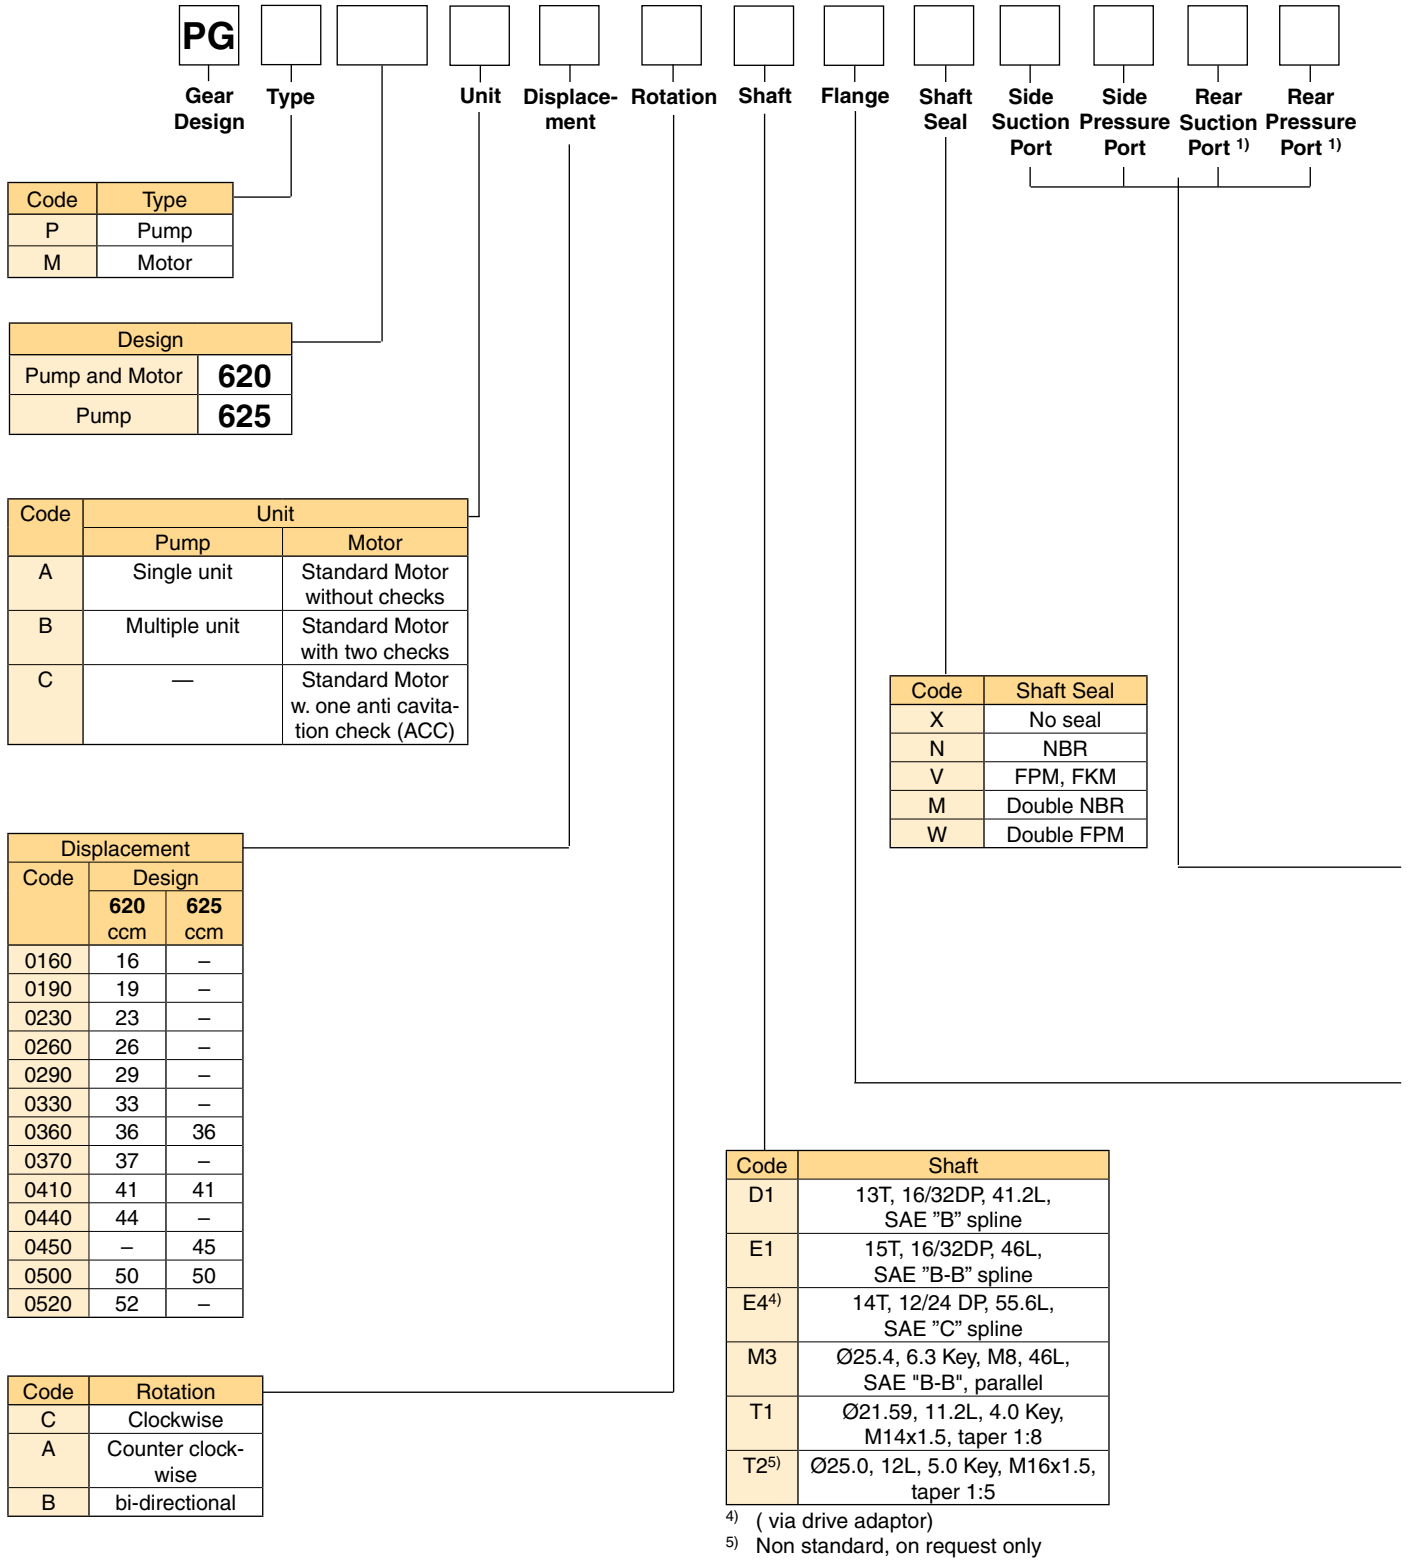

**Features**

- Patented interlocking body design
- 12 tooth gears, bronze balance plates
- Tandem, triple and cross-frame pumps available
- Common inlets available for tandem and triple pumps
- Continuous operating pressures up to 310 bar
- Production run-in available to suite OEM application conditions and to provide optimized volumetric efficiencies
- Pressure balanced design for high efficiency
- Reduced system noise levels compared to earlier models
- High power through-drive capability
- Wide range of integral valves for power steering, power brakes, fan drivers and implement hydraulics
- Load sense and solenoid operated unloading valves

**Characteristics**

Pump type	Heavy-duty, cast iron, external gear.
Mounting	SAE, rectangular, thru-bolt standard specials on request.
Ports	SAE and metric split flanges and others
Shaft style	SAE splined, keyed, tapered, cylindrical tang drive, specials on request
Speed	500 - 3500 rpm, see Technical Data
Theor. displacement	See Technical Data
Drive	Drive direct with flexible coupling is recommended.
Axial / Radial load	Units subject to axial or radial loads must be specified with an outboard bearing.
Inlet pressure	Operating range 0.8 to 2 bar abs. Min. inlet pressure 0.5 bar abs. Short time without load. Consultation is recommended.
Outlet pressure	See Technical Data
Flow velocity	See Nomograph for Pipe Velocity
Hydraulic fluids	Hydraulic oil HLP, DIN 51524-2
Fluid temperature	Range of operating temperature -15 to +80 °C. Max. permissible operating pressure dependent on fluid temperature. Temperature for cold start -20 to -15 °C at speed ≤ 1500 rpm. Max. permissible operating pressure dependent on fluid temperature.

Fluid viscosity	Range of operating viscosity 8 to 1000 mm <sup>2</sup> /s. Max. permissible operating pressure dependent on viscosity. Viscosity range for cold start 1000 to 2000 mm <sup>2</sup> /s at operating pressure p ≤ 10 bar and speed n ≤ 1500 rpm.
Range of ambient temperature	-40 °C to +70 °C
Filtration	According to ISO 4406 Cl. 19/17/13
Direction of rotation (looking at the drive shaft)	Clockwise, counter-clockwise or double. Attention! Drive pump only in indicated direction of rotation.
Multiple pump assemblies	<ul style="list-style-type: none"> <li>• Available in two or three section configuration.</li> <li>• Max. shaft load must be conform to the limitations shown in the shaft loading rating table in this catalogue.</li> <li>• Max. load is determined by adding the torque values for each pumping section that will be simultaneously loaded.</li> </ul>
Separate or common inlet capability	Separate inlet configuration: <ul style="list-style-type: none"> <li>• Each gear housing has individual inlet and outlet ports.</li> </ul> Common inlet configuration: <ul style="list-style-type: none"> <li>• Two gear sets share a common inlet.</li> </ul>

Nomograph for Pipe Velocity

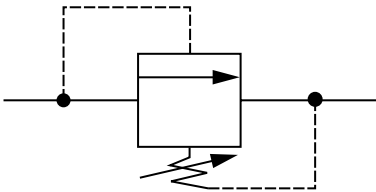

**Pressure relief valve / adjustable internal vent**

**Introduction:**

Parker’s valve program was developed in response to requests from OEM customers to reduce the number and total cost of components on their machines. We addressed this challenge by integrating the valves required for machine functions into our hydraulic pumps and motors.

This integration has reduced the number of purchased components, eliminated many of the hydraulic hoses and associated fittings (and potential leak points), and reduced assembly labor cost on the production line.

Priority Flow Divider  
Function "A"

Priority Flow Divider With Full Flow R/V  
Function "B"

Priority Flow Divider With Pilot R/V  
Function "C"

**Priority Flow Divider**

**Comments:**

The Priority Flow Divider provides a constant and specified flow for power steering or other priority functions. The balance of flow produced by the pump is available from the EF port for additional functions such as open center directional control valves, fan drives , etc. It can also be fitted with a pressure relief valve

**Variations for PGP 511 / 517 / 620 / 625 / 640**

- without priority relief valve (Function "A")
- with full flow priority relief valve (Function "B")
- with pilot priority relief valve (Function "C")

Pressure Range	
P-port Maximum	230 bar
EF-port Maximum	250 bar

Maximum Flows	
<b>for PGP 511</b>	
P-port	32 lpm
EF-port	70 lpm
max. input flow	70 lpm
<b>for PGP 517 / 620 / 625 / 640</b>	
P-port	45 lpm
EF-port	100 lpm
max. input flow	100 lpm

Port Configuration „A“  
 Port Orientation „B“

Port Configuration „D“  
 Port Orientation „A“

Port Configuration „C“  
 Port Orientation „B“

**Side Mounted Priority Flow Divider (Load Sense or Fixed Flow)**

**Comments:**

Priority Flow Dividers can also be direct mounted to the pressure port to provide a constant and specified flow for power steering or other priority functions.

**Variations for PGP 511 / 517 / 620 / 625 / 640**

- without priority relief valve (Function "A")
- with full flow priority relief valve (Function "B")
- with pilot priority relief valve (Function "C")

Note: relief valve in the steering unit is required.  
 control pressure settings and priority flow settings on request

Load Sensing Priority Valve with Dynamic Load Sensing Signal Function "F"

Load Sensing Priority Valve with Dynamic Load Sensing Signal Function "G"

**Load Sensing Priority Valve**

**Comments:**

The Load sense Priority Valve provides priority flow on demand, typically for LS power steering: The balance of the flow produced by the pump is available from the EF port for additional functions such as open center directional control valves, fan drives , etc. When the power steering is idle, full pump flow is available for these functions  
 The selection of pilot relief and static or dynamic signal is dependent on the characteristics of the selected steering unit.

**Variations for PGP 511 / 517 / 620 / 625 / 640**

without pilot relief, dynamic LS signal (Function "G") / with pilot relief, dynamic LS signal (Function "F") without pilot relief, static LS signal / with pilot relief, static LS signal

Pressure Range	
P-port Maximum	230 bar
EF-port Maximum	equal to max. rating of pump

Maximum Flows

**Single Pressure Relief Valve**

**Comments:**

Integral relief valve to protect the motor.

Motors with this valve may be applied in series with relief valve providing a limit to the pressure differential, and hence, the output torque.

**Variations for PGM 511 / PGM 620 / PGM 640**

adjustable, with internal or external drain

**Applications**

Fan Drives, Mower Blade Drives, Compressor Drives and Water Pump Drives

Motor Range			
Ranges	PGM 511	PGM 620	PGM 640 .
Maximum Flow	75 lpm	113 lpm	113 lpm
Pressure Range	25-250 bar	25-280 bar	25-310 bar

**Single Pressure Relief Valve with Anti-Cavitation**

**Comments:**

Motors fitted with this relief valve may be applied in series with relief valve providing a limit to the pressure differential, and hence, the output torque.  
 The check valve allows the motor and driven load to “spool down” when the fluid supply is shut off or reduced due to engine speed fluctuations.  
 In series operation, the check valve permits the motor to come to a controlled stop should the outlet flow be suddenly blocked.  
 This valve reduces the risk of damaging the motor or blowing a hydraulic line.  
 Motors fitted with this valve are available with side or rear facing ports.

**Variations for PGM 511 / PGM 620 / PGM 640**

non-adjustable, with reverse flow check with internal or external drain

**Applications**

Fan Drives, Mower Blade Drives, Compressor Drives and Water Pump Drives

Motor Range PGM 511 / PGM 620 / PGM 640	
Pressure Range	35-250 bar
Maximum Flow	100 lpm

CODE	Pressure bar

RMAP	90
RMAR	100
RMAV	120
RMBB	150
RMBD	160
RMBK	190
RMBP	210
RMBT	230

**Cross Port Pressure Relief Valves**

**Comments:**

Integral cross port relief to protect motor and to limit torque in both directions of rotation.  
 Motors fitted with this relief valve cover may be operated in series with other motors downstream when using external case drain.  
 Limited change to the factory set is possible .  
 Side ports are standard in order to minimize overall length.

**Variations for PGM 511 / PGM 620 / PGM 640**

adjustable with internal and external drain

**Applications**

Fan Drives, Mower Reel Drives, and all low-medium power reversible drives

Motor Range			
Ranges	PGM 511	PGM 620	PGM 640 .
Maximum Flow	75 lpm	113 lpm	113 lpm
Pressure Range	25-250 bar	25-280 bar	25-310 bar

**Cross Port Pressure Relief Valves with Anti-Cavitation**

**Comments:**

Motors fitted this relief valve may be applied in series or in hydraulic transmission with relief valve providing a limit to the pressure differential, and hence, the output torque.

The check valves allow flow to return to the inlet of the motor to prevent cavitation.

Motor available with side ports, rear ports or combination of side and rear ports.

**Variations for PGM 511 / PGM 620 / PGM 640**

non-adjustable with internal or external drain

**Applications**

Fan Drives, Mower Blade Drives, Water Pump Drives and reversible hydrostatic transmissions

Motor Range PGM 511 / PGM 620 / PGM 640	
Pressure Range	35-250 bar
Maximum Flow	100 lpm

CODE	Pressure bar

RMDB	150
RMDD	160
RMDK	190
RMDP	210
RMDT	230

**Cross Port Pressure Relief Valves with Anti-Cavitation + Check Valves**

**Comments:**

Motors with cross-port relief valve and anti-cavitation check valves in case drain passages are suitable for open-circuit applications with closed center valves and hydrostatic transmissions. The check valves allow flow to return to the inlet of the motor to prevent cavitation.

For winches, make up flow at low pressure is introduced at the case drain port.

**Variations for PGM 511 / PGM 620 / PGM 640**

non-adjustable, with reverse flow check with internal or external drain

**Applications**

Fan Drives, Mower Blade Drives, Water Pump Drives and reversible hydrostatic transmissions, vibration drives on vibratory, rollers and winches

Motor Range PGM 511 / PGM 620 / PGM 640	
Pressure Range	25-250 bar
Maximum Flow	100 lpm

**Solenoid Proportional Pressure Relief Valve**

**Comments:**

In a fan drive circuit fan speed is adjusted by providing a varying Pulse Width Modulated electrical current signal to the proportional relief valve which controls the flow to the fan motor. The proportional valve is typically a normal closed type to assure failsafe full fan speed in case of a lost signal. The anti-cavitation check valve allows the motor to spin freely when the fan is powered down.

**Variations for PGM 511 / PGM 620 / PGM 640**

normally open valves, increasing pressure with increasing current  
 normally closed valves, decreasing pressure with increasing current with internal or tank return

**Applications**

Fan Drives

Termination	on request

**Speed Sensor**

This rugged, weather resistant speed sensor is a Hall effect device. When externally powered, 30 square wave digital pulses per output shaft revolution are produced. By signal multiplication, 60 pulses per revolution can be obtained. The installation of this economical sensor does not affect the torque or side load capability of the motor into which it is installed. The sensor has reverse polarity protection but no short circuit protection.

Speed sensor data	
Operating voltage range	4.5...24 V (DC)
